- D. AWS IAM, Amazon EC2, Amazon S3, Amazon IAM, Amazon CloudTrail

Explanation:

With VPC Flow logs you can get the list of IP addresses which are hitting the Instances in your VPC You can then use the information in the logs to see which external IP addresses are sending a flurry of requests which could be the potential threat for a DDoS attack.

Option B is incorrect Cloud Trail records AWS API calls for your account. VPC Flowlogs logs network traffic for VPC, subnets. Network interfaces etc.

As per AWS, VPC Flow Logs is a feature that enables you to capture information about the IP traffic going to and from network interfaces in your VPC where as AWS CloudTrail, is a service that captures API calls and delivers the log files to an Amazon

S3 bucket that you specify.

Option C is invalid this is a config service and will not be able to get the IP addresses Option D is invalid because this is a recommendation service and will not be able to get the IP addresses For more information on VPC Flow Logs, please visit the following URL:
