NEW QUESTION: 2

An administrator makes a configuration change on a Mobility Master (MM) that causes a Managed Controller to lose connectivity with the MM. The MC attempts auto roll-back, but this fails.

How should the administrator recover from this problem?

- A.** Reboot the MC to force auto-roll back to occur.
- B.** Access the CLI of the MC and identify the previous configuration file the MC should use.
- C.** Access the CLI of the MC and execute the no command to revert the changes.
- D.** Access the CLI of the MC, execute the disaster-recovery command, and undo the changes.

Answer: D

NEW QUESTION: 3

Which two statements are true about AAA? (Choose two.)

- A.** AAA can be used to authenticate the enable password with a AAA server.
- B.** If RADIUS is the only method configured in AAA, and the server becomes unreachable, the user will be able to log in to the router using a local username and password.
- C.** If the local keyword is not included and the AAA server does not respond, then authorization will never be possible and the connection will fail.
- D.** AAA can use RADIUS, TACACS+, or Windows AD to authenticate users.

Answer: A,C

Explanation:

AAA can be used to authenticate user login and the enable passwords.

Example 1: Same Exec Authentication Methods for All Users

Once authenticated with:

```
aaa authentication login default group radius local
```

All users who want to log in to the access server have to be authorized using Radius (first method) or local database (second method).

We configure:

```
aaa authorization exec default group radius local
```

Note. On the AAA server, Service-Type=1 (login) must be selected.

Note. With this example, if the local keyword is not included and the AAA server does not respond, then authorization will never be possible and the connection will fail.
