You need to authenticate the users.

Which code segment should you use?

- A. Option C

- B. Option D
- C. Option A
- D. Option B

Answer: B

Explanation:

Explanation/Reference:

Explanation:

When implementing a custom membership provider, you are required to inherit the MembershipProvider abstract class. There are two primary reasons for creating a custom membership provider.

You need to store membership information in a data source that is not supported by the membership providers included with the .NET Framework, such as a FoxPro database, an Oracle database, or other data source.

You need to manage membership information using a database schema that is different from the database schema used by the providers that ship with the .NET Framework. A common example of this would be membership data that already exists in a SQL Server database for a company or Web site.

Reference: MembershipProvider Class
