Answer: B

NEW QUESTION: 2
Which statement about multicast VPN is true?
A. The MDT group address should be different for both address families in the same VRF.
B. The MDT group address should be the same for both address

families in the different VRFs.
C. Configuration of the MDT source on a pre-VRF basis is supported only on IPv6.
D. The MDT group address should be the same for both address families in the same VRF.
Answer: D
Explanation:
Restrictions for Multicast VPN for Multicast Routing
* Configuration of the MDT source on a per-VRF basis is only supported on IPv4. * The
MDT group address should be the same for both the address families in the same VRF.
Default-MDTs must have the same group address for all VRFs that comprise a MVPN.
Data-MDTs may have the same group address if PIM-SSM is used. If PIM-SM is used,
they must have a different group address, as providing the same one could result in the PE
router receiving unwanted traffic. This is a PIM-SM protocol issue, not an implementation
issue.

NEW QUESTION: 3
