We offer you free demo to have a try before **New 250-567 Test Guide** buying, Nowadays, this fields have witnessed all kinds of reviewing materials emerged,the good and bad are intermingled, a large number 250-567 Test Engine Version of companies exaggerate their products and raise their prices to cheat candidates.

If you get one 250-567 certification successfully with help of our 250-567 premium VCE file you can find a high-salary job in more than 100 countries worldwide where these certifications are available.

Now let us take a succinct look together, All the questions **New 250-567 Test Guide** are edited according to the analysis of data and summarized from the previous test, which can ensure the high hit rate.

The 250-567 practice questions from our Wdh-Namgiang come along with correct answers and detailed answer explanations and analysis created for any level of experience of Wdh-Namgiang 250-567 exam questions.

NEW QUESTION: 1
Authorization that defines the authorization object name and the authorization name for which an administrator has authorization and the activities that are allowed ?
A. S_USER_AUTH
B. S_USER_TCD
C. S_USER_GRP
D. S_USER_AGR
E. S_USER_PRO
Answer: A

NEW QUESTION: 2
When an attack occurs, many packets are found on the attacked host (1.1.129.32) as shown in the figure.
According to the analysis of the attack, what kind of attack is this attack?

A. Smurf
B. WinNuke
C. Ping of Death
D. Land
Answer: D
Explanation:
Explanation
Note: Land attack: It is to set the source address and destination address of the TCP SYN packet to the IP address of a certain victim. This will cause the victim to send a SYN-ACK message to its own address, which in turn will send back an ACK message and create an empty connection, each of which will remain until timeout. Various victims react differently to Land attacks, many UNIX hosts will crash, and NT hosts will become extremely slow.

NEW QUESTION: 3
Which field is specific to the OPSFv3 packet header, as opposed to the OSPFv2 packet header?
A. AuType
B. router ID
C. instance ID
D. checksum
Answer: C
Explanation:
In OSPFv3, Instance ID is a new field that is used to have multiple OSPF process' instance per link. By default it is 0 and for any additional instance it is increased, instance ID has local link significance only. OSPFv3 routers will only become neighbors if the instanceIDs match. It is thus possible to have multiple routers on a broadcast domain and all run Ospfv3 but not all of them becoming neighbors.
