Topic 2, Contoso, Ltd Case Study
Background
You are the database administrator for Contoso, Ltd. The company has 200 offices around the world. The company has corporate executives that are located in offices in London, New York, Toronto, Sydney, and Tokyo.
Contoso, Ltd. has a Microsoft Azure SQL Database environment. You plan to deploy a new Azure SQL Database to support a variety of mobile applications and public websites.
The company is deploying a multi-tenant environment. The environment will host Azure SQL Database instances. The company plans to make the instances available to internal departments

and partner companies. Contoso is in the final stages of setting up networking and communications for the environment. Existing Contoso and Customer instances need to be migrated to Azure virtual machines (VM) according to the following requirements:
The company plans to deploy a new order entry application and a new business intelligence and analysis application. Each application will be supported by a new database. Contoso creates a new Azure SQL database named Reporting. The database will be used to support the company's financial reporting requirements. You associate the database with the Contoso Azure Active Directory domain.
Each location database for the data entry application may have an unpredictable amount of activity. Data must be replicated to secondary databases in Azure datacenters in different regions. To support the application, you need to create a database named contosodb1 in the existing environment.
Objects

Database
The contosodb1 database must support the following requirements:
Application
For the business intelligence application, corporate executives must be able to view all data in near real-time with low network latency.
Contoso has the following security, networking, and communications requirements:

NEW QUESTION: 3
You administer an environment that uses a Windows Server 2012 R2 Hyper-V cluster and System Center 2012 R2 Virtual Machine Manager (VMM).
You plan to deploy two virtual machines (VMs) that host a lineof-business (LOS) application. The VMs must reside on the same Hyper-V host server at all times. The LOB application does

NOT require high availability.
You need to deploy the VMs.
What should you do?
A. Configure the VMs to reside on the same storage area networks (SANs).
B. Add a custom property to both VMs, and assign the same value to each property. Configure the Hyper-V host cluster to use the same custom property and value. Configure a custom placement rule that uses filters that are based on the custom property and value.
C. Add a custom property to both VMs, and assign the same value to each property. Configure the VMs as members of the same availability set.
D. Configure the VMs to use the same VM network.
