When the overall price level is rising, nominal interest rates tend to be:

- A. Falling.
- B. None of the above.
- C. Rising.
- D. Unaffected by changes in the price level.

Answer: C

Explanation:

Choice "c" is correct. The relationship between nominal interest rates and inflation can be seen by rearranging the equation for real interest rates as follows:
Nominal Interest Rate = Real Interest Rate + Inflation
Thus, if real interest rates do not change, a 1% increase in the inflation rate will lead to a 1% increase in nominal interest rates.

Enable Azure Data Lake Storage credential passthrough for a high-concurrency cluster.

Incorrect:

Support for Azure Data Lake Storage credential passthrough on standard clusters is in Public Preview.

Standard clusters with credential passthrough are supported on Databricks Runtime 5.5 and above and are limited to a single user.

Box 2: Azure Data Lake Storage Gen1 Credential Passthrough

You can authenticate automatically to Azure Data Lake Storage Gen1 and Azure Data Lake Storage Gen2 from Azure Databricks clusters using the same Azure Active Directory (Azure AD) identity that you use to log into Azure Databricks. When you enable your cluster for Azure Data Lake Storage credential passthrough, commands that you run on that cluster can read and write data in Azure Data Lake Storage without requiring you to configure service principal credentials for access to storage.
