You have instances running on your VPC. You have both
production and development based instances
running in the VPC. You want to ensure that people who are
responsible for the development instances don't
have the access to work on the production instances to ensure
better security. Using policies, which of the
following would be the best way to accomplish this? Choose the
correct answer from the options given below
A. Launchthe test and production instances in separate VPC's
and use VPC peering
B. Createan lAM policy with a condition which allows access to
only instances that areused for production
or development
C. Launchthe test and production instances in different
Availability Zones and use MultiFactor
Authentication
D. Definethe tags on the test and production servers and add a
condition to the lAMpolicy which allows
access to specific tags

Answer: D
Explanation:
Explanation
You can easily add tags which define which instances are production and which are development instances
and then ensure these tags are used when controlling access via an 1AM policy.
