NEW QUESTION: 1

A company named Fabrikam, Inc. has a Microsoft Azure web app. Billions of users visit the app daily.

The web app logs all user activity by using text files in Azure Blob storage. Each day, approximately 200 GB of text files are created.

Fabrikam uses the log files from an Apache Hadoop cluster on Azure DHDnsight.

You need to recommend a solution to optimize the storage of the log files for later Hive use.

What is the best property to recommend adding to the Hive table definition to achieve the goal? More than one answer choice may achieve the goal. Select the BEST answer.

- A. STORED AS TEXTFILE
- B. STORED AS GZIP
- C. STORED AS RCFILE
- D. STORED AS ORC

Answer: D

Explanation:

Explanation: The Optimized Row Columnar (ORC) file format provides a highly efficient way to store Hive data. It was designed to overcome limitations of the other Hive file formats. Using ORC files improves performance when Hive is reading, writing, and processing data.

Compared with RCFile format, for example, ORC file format has many advantages such as:

- * a single file as the output of each task, which reduces the NameNode's load
- * Hive type support including datetime, decimal, and the complex types (struct, list, map, and union)
- * light-weight indexes stored within the file
- * skip row groups that don't pass predicate filtering
- * seek to a given row
- * block-mode compression based on data type
- * run-length encoding for integer columns
- * dictionary encoding for string columns
- * concurrent reads of the same file using separate RecordReaders
- * ability to split files without scanning for markers
- * bound the amount of memory needed for reading or writing
- * metadata stored using Protocol Buffers, which allows addition and removal of fields

NEW QUESTION: 2

BCP (Best Common Practices) 38/RFC 2827 Ingress and Egress Packet Filtering would help mitigate what classification of attack?

- A. Spoofing attack
- B. Sniffing attack
- C. Reconnaissance attack
- D. Port Scan attack
- E. Denial of service attack

Answer: A

Explanation:

6. Summary Ingress traffic filtering at the periphery of Internet connected networks will reduce the effectiveness of source address spoofing denial of service attacks. Network service providers and administrators have already begun implementing this type of filtering on periphery routers, and it is recommended that all service providers do so as soon as possible. In addition to aiding the Internet community as a whole to defeat this attack method, it can also assist service providers in locating the source of the attack if service providers can categorically demonstrate that their network already has ingress filtering in place on customer links. Corporate network administrators should implement filtering to ensure their corporate networks are not the source of such problems. Indeed, filtering could be used within an organization to ensure users do not cause problems by improperly attaching systems to the wrong networks. The filtering could also, in practice, block a disgruntled employee from anonymous attacks. It is the responsibility of all network administrators to ensure they do not become the unwitting source of an attack of this nature.
