CORRECT TEXT

Answer:
Explanation:
Find the solution with all steps below.
Explanation:
Citrix StoreFront Configuration

1.When the wizard starts enter a store name.
2.Now we need to add the delivery controllers (Controller1)
that StoreFront will interface with

6.Once the store is created it will give you the web browser
URL that you can use to access it. Also take note that to
access StoreFront from a web browser you must append "Web" to
the store URL, as the URL shows below. Don't try going to
/Citrix/Store as that won't work.
7.To change the StoreFront base URL you can go to the Server
Group node and in the right pane select Change Base URL. Change
URL to use HTTPS and port 8080

8. Back in the StoreFront console, after refreshing, you can
see that the service is using HTTP.

9. One quick tweak to make authentication easier is to set a
default domain. This way the user doesn't have to enter a
domain when authenticating to the StoreFront web site. Locate
the Authentication node, then in the right pane click on
Configure Trusted Domains.

And that's pretty much it to get an operational StoreFront. If
you open your browser and go to the full web store URL you
should get a green bubbly Citrix receiver page.
