**Answer: D**
Explanation:
Explanation
CloudWatch is used to monitor AWS as well as the custom
services. To enable detailed instance monitoring for a new Auto
Scaling group, the user does not need to take any extra steps.
When the user creates the Auto Scaling launch config as the
first step for creating an Auto Scaling group, each launch
configuration contains a flag named InstanceMonitoring.Enabled.
The default value of this flag is true. When the user has
created a launch configuration with InstanceMonitoring.Enabled
= false it will involve multiple steps to enable detail
monitoring. The steps are:

ì„ íf• í•´ì£¼ì„¸ìš":
A. AWS ê´€ë¦¬ í~• ì •ì±…
B. ë²„í,· ACL
C. ë²„í,· ì •ì±…
D. ì•¸ë•¼ì•¸ ì •ì±…
**Answer: D**
Explanation:
The AWS Documentation gives an example on such a case
Inline policies are useful if you want to maintain a strict
one-to-one relationship between a policy and the principal
entity that if s applied to. For example, you want to be sure
that the permissions in a policy are not inadvertently assigned

to a principal entity other than the one they're intended for. When you use an inline policy, the permissions in the policy cannot be inadvertently attached to the wrong principal entity. In addition, when you use the AWS Management Console to delete that principal entit the policies embedded in the principal entity are deleted as well. That's because they are part of the principal entity.
Option A is invalid because AWS Managed Polices are ok for a group of users, but for individual users, inline policies are better.
Option C and D are invalid because they are specifically meant for access to S3 buckets For more information on policies, please visit the following URL:
https://docs.aws.amazon.com/IAM/latest/UserGuide/access managed-vs-inline The correct answer is: An Inline Policy

**NEW QUESTION: 3**
Identify three statements that are true about processing automatic withholding tax invoices and payments. (Choose three.)
**A.** Payables uses the supplier number as an invoice number for the tax authority's invoice.
**B.** If an invoice is paid or partially paid, withholding distribution cannot be reversed.
**C.** Withholding tax distributions are automatically created during invoice validation or payment processing.
**D.** Payables automatically creates a withholding type distribution when a withholding tax group is entered in the Invoices window.
**E.** Withholding distributions for a paid invoice can be reversed.
**Answer: B,C,D**

**NEW QUESTION: 4**
A company with multiple accounts is currently using a configuration that does not meet the following security governance policies
* Prevent ingress from port 22 to any Amazon EC2 instance
* Require billing and application tags for resources
* Encrypt all Amazon EBS volumes
A Solutions Architect wants to provide preventive and detective controls including notifications about a specific resource, if there are policy deviations.
Which solution should the Solutions Architect implement?
**A.** Create an AWS CodeCommit repository containing policy-compliant AWS Cloud Formation templates. Create an AWS Service Catalog portfolio Import the Cloud Formation templates by attaching the CodeCommit repository to the portfolio

Restrict users across all accounts to items from the AWS
Service Catalog portfolio Use AWS Config managed rules to
detect deviations from the policies. Configure an Amazon
CloudWatch Events rule for deviations, and associate a
CloudWatch alarm to send notifications when the TriggeredRules
metric is greater than zero.
**B.** Restrict users and enforce least privilege access using AWS
I AM. Consolidate all AWS CloudTrail logs into a single account
Send the CloudTrail logs to Amazon Elasticsearch Service
(Amazon ES). Implement monitoring alerting, and reporting using
the Kibana dashboard in Amazon ES and with Amazon SNS.
**C.** Implement policy-compliant AWS Cloud Formation templates for
each account and ensure that all provisioning is completed by
Cloud Formation Configure Amazon Inspector to perform regular
checks against resources Perform policy validation and write
the assessment output to Amazon CloudWatch Logs. Create a
CloudWatch Logs metric filter to increment a metric when a
deviation occurs Configure a CloudWatch alarm to send
notifications when the configured metric is greater than zero
**D.** Use AWS Service Catalog to build a portfolio with products
that are in compliance with the governance policies in a
central account Restrict users across all accounts lo AWS
Service Catalog products Share a compliant portfolio to other
accounts Use AWS Config managed rules to detect deviations from
the policies Configure an Amazon CloudWatch Events rule to send
a notification when a deviation occurs
**Answer: C**
