Prep4cram values candidates' opinions **Reliable C1000-149 Study**

to create for the column which are included in the WHERE clause where the column is highly skewed. Histogram helps to optimizer to decide whether to use an index or full-table scan or help the optimizer determine the fastest table join order.

Incorrect:

A: 100 is the maximum value of OPTIMIZER_INDEX_COST_ADJ

Note: OPTIMIZER_INDEX_COST_ADJ lets you tune optimizer behavior for access path selection to be more or less index friendly—that is, to make the optimizer more or less prone to selecting an index access path over a full table scan. The default for this parameter is 100 percent, at which the optimizer evaluates index access paths at the regular cost. Any other value makes the optimizer evaluate the access path at that percentage of the regular cost. For example, a setting of 50 makes the index access path look half as expensive as normal.

B: DB_FILE_MULTIBLOCK_READ_COUNT does not apply:

DB_FILE_MULTIBLOCK_READ_COUNT is one of the parameters you can use to minimize I/O during table scans. It specifies the maximum number of blocks read in one I/O operation during a sequential scan. The total number of I/Os needed to perform a full table scan depends on such factors as the size of the table, the multiblock read count, and whether parallel execution is being utilized for the operation.

F: High (not low) row per block could make a table scan preferable.

NEW QUESTION: 3

You have created a geolocation steering policy in the Traffic Management service, with this configuration.

What happens to requests that originate in Africa?

- A. The traffic will be forwarded at the same time to both Pool 1 and Pool 2.
- B. The traffic will be dropped.
- C. The traffic will be forwarded to Pool 1. If Pool 1 is not available, then will be forwarded to Pool 2.
- D. The traffic will be forwarded randomly to any of the pools mentioned in the rules.

Answer: B

Explanation:

Explanation

The Oracle Cloud Infrastructure Traffic Management Steering Policies service is a critical component of DNS.

Traffic Management Steering Policies enables you to configure policies to serve intelligent responses to DNS queries, meaning different answers (endpoints) may be served for the query depending on the logic the customer defines in the policy.

Traffic Management Steering Policies can account for health of answers to provide failover capabilities, provide the ability to load balance traffic across multiple resources, and account

for the location where the query was initiated to provide a simple, flexible and powerful mechanism to efficiently steer DNS traffic.

WORLDWIDE GEOLOCATION TREATMENT

You can divide your global users into geographically defined regions (for example, state/province level in NA, country level for rest of world) and steer customers to specified resources based on their location. This helps to ensure global, high performing internet resolution, and supports functions such as ring fencing. For example, keeping traffic from China in China and block traffic outside of China into China.
