NEW QUESTION: 4

The database is configured in ARCHIVELOG mode. The database needs to be up 24 X 7. You want to perform user-managed backup for the data files of the HR_DATA tablespace. To accomplish the task, you issued the following command:

SQL> ALTER TABLESPACE hr_data BEGIN BACKUP;

Which two statements are true in this scenario? (Choose two.)

- A. The database writes the before image of an entire block to the redo stream before modifying block for the first time.
- B. No transaction on the tablespace is allowed but you can perform queries.
- C. The checkpoint change number is frozen in headers of the data files until the file is removed from backup mode.
- D. The tablespace will automatically come out of backup mode when the file copy is complete.

Answer: A,C

Explanation:

Explanation:

Making User-Managed Backups of Online Read/Write Tablespaces

You must put a read/write tablespace in backup mode to make user-managed data file backups when the tablespace is online and the database is open. The ALTER TABLESPACE ... BEGIN BACKUP statement places a tablespace in backup mode. In backup mode, the database copies whole changed data blocks into the redo stream. After you take the tablespace out of backup mode with the ALTER TABLESPACE ...

END BACKUP or ALTER DATABASE END BACKUP statement, the database advances the data file checkpoint SCN to the current database checkpoint SCN.

When restoring a data file backed up in this way, the database asks for the appropriate set of redo log files to apply if recovery is needed. The redo logs contain all changes required to recover the data files and make them consistent.
