In recent years, our test torrent has <u>CTAL-TAE</u> been well received and have reached 99% pass rate with all our dedication.

NEW QUESTION: 1

A. Option A
B. Option D
C. Option B
D. Option C
Answer: A,C

NEW QUESTION: 2
A document set has been processed and is ready for review by two different review teams. Each team must redact the documents with a different criteria for two separate productions. Team one should use black for redacting pages and team two should use white to redact personally identifiable information.
How can this be achieved?
A. set up two case templates and specify the criteria for each template
B. set up two review templates and specify the criteria for each template
C. set up two redaction sets and each team selects their set during review
D. set up two tag sets and specify the criteria for each set
Answer: C
Explanation:
Topic 17, Performing production and export

NEW QUESTION: 3
Your network has Network Access Protection (NAP) deployed. The network contains two servers named Server1 and Server2. Server1 is Network Policy Server (NPS). Server2 has a third-party antivirus solution installed.
Server1 is configured to use a custom system health validator provided by the antivirus vendor. The system health validator uses Server to identify the version of the current antivirus definition.
You need to ensure that NAP clients are considered noncompliant if Server1 cannot connect to Server2.
Which error code resolution setting should you configure?
A. SHV not responding
B. SHA not responding to NAP client
C. SHA unable to contact required services
D. SHV unable to contact required services
Answer: D
Explanation:

System health validators (SHVs) define configuration requirements for NAP client computers. Windows Security Health Validator (WSHV) is included with Windows Server 2008 and Windows Server 2008 R2.
SHV error codes:
All SHVs include five error code conditions. If an error code is returned to the SHV, you can choose to have the SHV evaluate the client as either compliant or noncompliant.
The following figure describes Windows Security Health Validator Properties dialog box in Windows Server 2008.

Windows Security Health Validator Properties dialog box
The following is a description of the available error codes:
SHV unable to contact required services. This error can occur if NPS loses connectivity to a health requirement server, such as an antivirus signature server.
SHA unable to contact required services. This error can occur if the SHA is unable to successfully read the client configuration.
SHA not responding to NAP Client. This error can occur if a SHA is not properly initialized and registered.
SHV not responding. This error can occur if the performance of an SHV is degraded (for example, if NPS is out of memory).
Vendor specific error code received. This error can occur if NPS receives an error code that is unique to the SHA or SHV vendor. Some vendors might return this code when NPS is unable to contact a health requirement server.
