Refer AWS documentation - DynamoDB Design partition key
The partition key portion of a table s primary key determines
the logical partitions in which a table's data is stored. This
in turn affects the underlying physical partitions. Provisioned
I/O capacity for the table is divided evenly among these
physical partitions. Therefore a partition key design that
doesn't distribute I/O requests evenly can create "hot"
partitions that result in throttling and use your provisioned
I/O capacity inefficiently.
The optimal usage of a table's provisioned throughput depends
not only on the workload patterns of individual items, but also
on the partition-key design. This doesn t mean that you must
access all partition key values to achieve an efficient
throughput level, or even that the percentage of accessed
partition key values must be high. It does mean that the more
distinct partition key values that your workload accesses, the
more those requests will be spread across the partitioned
space. In general, you will use your provisioned throughput
more efficiently as the ratio of partition key values accessed
to the total number of partition key values increases.

NEW QUESTION: 2
A large IPTV service provider primarily uses multicast for
delivering IPTV services to its customers. The service provider
delivers digital television channels to home viewers by using a
set-top box as a home appliance and controls this device
through its video middleware. Each video channel uses a unique
multicast group address. Recently, some channels have higher
channel change times; to alleviate this problem, a number of
solutions were discussed between the operations and engineering
groups. Adding to the complexity of the issue is the fact that
the business has been growing, and the service provider made
acquisitions both in its home operating market and new
geographic locations. These changes have made the management of
source and group addresses a major concern. The engineering
team thinks that using static joins for popular channels at the
edge routers and moving away from Sparse Mode to SSM-based
forwarding will improve performance issues.
What are two valid concerns for the operations group? (Choose
two.)
A. If SSM is used in the network, the operations team will need
to use the rendezvous point for multicast monitoring.
B. Replacing a shared multicast tree with SSM offers no
security or convergence advantage.
C. Provisioning and managing static joins can increase
operational overhead.
D. Using DNS-based SSM maps might not be possible.
E. A mix of static and dynamic joins will make troubleshooting
difficult.
Answer: C,D

NEW QUESTION: 3
Ein Techniker erhält mehrere Anrufe von Benutzern, die angeben, dass Dokumente, die an einen freigegebenen Drucker gesendet werden, nicht gedruckt werden. Der Techniker kann das Gerät anpingen, um zu bestätigen, dass es eingeschaltet und mit dem Netzwerk verbunden ist. Der Techniker druckt erfolgreich eine Testseite über das Bedienfeld des Geräts. Welche der folgenden Aktionen sollte der Techniker als NÄCHSTES ausführen?
A. Konfigurieren Sie die TCP / IP-Einstellungen neu
B. Installieren Sie die Druckertreiber neu
C. Starten Sie den Druckspooler neu
D. Entfernen Sie den Drucker und installieren Sie ihn erneut
