You will find the C_S4CAM_2202 valid questions & answers are all the key questions, unlike other vendors offering the dumps with lots of useless questions, wasting the precious time of

candidates.

We aim to make the best useful C_S4CAM_2202 pass4sure questions & answers and bring you the latest information about C_S4CAM_2202 actual test.

NEW QUESTION: 1

CORRECT TEXT

Fill in the Blank

An administrator plans to implement a multi-site Symantec Endpoint Protection (SEP) deployment.

The administrator needs to determine whether replication is viable without having to make network firewall changes or change defaults in SEP.

Which port should the administrator verify is open on the path of communication between the two proposed sites? (Type the port number.)

Answer:

Explanation:

8443

NEW QUESTION: 2

DRAG DROP

You are developing a business-to-business (B2B) solution by using an Azure Logic App.

You plan to use the Enterprise Integration Pack to allow the exchange of the X12 industry standard message format within your Logic App workflow. You start by creating a new Azure Resource Manager (ARM) resource group and Azure App Service plan.

You need to create the B2B solution.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:

NEW QUESTION: 3

You need to implement the business goals for the HR department. What should you do?

A. Activate Content Type Syndication Hub. Update the Column default value settings for the document library.

B. Enable enterprise metadata and keywords for the document libraries.

C. Add site columns to a document library. Save the document library as a template.

D. Create a content type that contains site columns. Add the

content type to the document libraries.

Answer: B

Explanation:

Topic 2, Contoso Ltd

Overview

This is a case study. Case studies are not timed separately. You can use as much exam time as you would like to complete each case. However, there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.

To answer the questions included in a case study, you will need to reference information that is provided in the case study. Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.

At the end of this case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.

To start the case study

To display the first question in this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment, and problem statements. If the case study has an All Information tab, note that the information displayed is identical to the information displayed on the subsequent tabs. When you are ready to answer a question, click the Question button to return to the question.

Existing Environment

Productivity Environment

Contoso recently installed a highly available SharePoint Server farm that has Office Server deployed.

Microsoft OneDrive for Business in SharePoint Server is deployed to 10,000 users.

All user accounts are currently stored in an Active Directory Domain Services (AD DS) environment. Each user account has a profile picture in Active Directory.

You recently purchased a SharePoint Online subscription. A small number of users currently use SharePoint Online by using cloud identities.

The root site collection of the farm has a URL of <https://portal.contoso.com>.

Tens of thousands of documents are added to the farm daily. The farm contains the servers shown in the following table.

Current Business Model

Contoso has the following business model:

- * Users in the research department apply hundreds of terms and keywords as metadata in document libraries.

- * The marketing department maintains an external database to

store customer information. The information is available in some SharePoint lists and libraries as metadata by using external content types.

Problem Statements

Contoso identifies the following issues:

- * Users report that it takes a long time for new documents to appear in search results and the SharePoint sites are slow to load.
- * Users in SharePoint Online cannot tag documents by using the terms and keywords available in SharePoint Server on-premises.
- * Users report that data refresh in Microsoft Excel Online and the Excel Web Access web part fail to work.

Requirements

Business Goals

Contoso wants to provide seamless, streamlined access to business information, while maintaining appropriate security for employees and contractors.

Technical Requirements

Contoso identifies the following technical requirements:

- * Add a picture to the user profile page of each user.
- * Resolve the Excel Online issues and enable Excel data refresh.
- * Deploy hybrid OneDrive for Business to the remaining 50,000 users.
- * Prevent solutions from affecting the performance of existing services.
- * Improve search indexing and response times of the existing SharePoint sites.
- * Ensure that solutions use the principle of least privilege whenever possible.
- * Migrate the terms and keywords from SharePoint Server on-premises to SharePoint Online.
- * Configure Microsoft Office 365 for SharePoint hybrid and provide a single sign-on (SSO) experience.

Configure the permissions for the external content types of the marketing department to meet the following requirements:

1. Users in the HR department must be able to see customer data.
2. Users in the research department must be able to read and write data.
3. Contractors must be able to see data directly from Office applications.

Ensure that on-premises data from SQL Server databases, SharePoint lists, and Oracle databases can be used to generate reports and dashboards in Microsoft Power BI.
