## NEW QUESTION: 3

Refer to the exhibit.

Why is the neighbor relationship between R1 & R2 and R1 & R3 an L2-type neighborship?

- A. because the area ID on R1 is different as compared to the area ID of R2 and R3
- B. because the circuit type on those three routers is L1/L2
- C. because the hello interval is not the same on those three routers
- D. because the network type between R1, R2, and R3 is point-to-point

**Answer: A**

Explanation:

With IS-IS, an individual router is in only one area, and the border between areas is on the link that connects two routers that are in different areas. A Level 2 router may have neighbors in the same or in different areas, and it has a Level 2 link-state database with all information for inter-area routing. Level 2 routers know about other areas but will not have Level 1 information from its own area.
