NEW QUESTION: 2
Which of the following datatypes cannot be filtered by using common filters?
Each correct answer represents a complete solution. Choose two.
A. Hyperlink
B. OLE Object
C. Calculated Field
D. AutoNumber
Answer: B,C
Explanation:
The following datatypes cannot be filtered by using common filters:
OLE Object: The OLE Object datatype is used to attach files and add binary data to a table. This datatype stores each data in a bitmap format.
This results in an increase in the size of a database file. Only a single file can be added to each row of a table. The files attached can be Microsoft Office files, graphics files, sound files, pdf files, etc.
Calculated Field: The Calculated Field datatype is used to store the results of a calculation. The calculation should refer to other fields created in the same table. In order to create the calculation, a user can use the Expression Builder that provides the use of IntelliSense and an easy way to access expression values.
Answer C and B are incorrect. These datatypes can be filtered by using common filters.
The Hyperlink datatype is used to store a hyperlink that is linked to a Web page or to a local or network file. It can store 1GB of data. Any type of file can be linked through this datatype. Each row of a table contains only one hyperlink.
The AutoNumber datatype is used for inserting a number automatically and incrementing it by one when a new record is inserted in a table. The increment can be changed through the New Values property. This property has the following two values:
Increment
Random

NEW QUESTION: 3

Answer:
Explanation:

Explanation

NEW QUESTION: 4

ServerA contains two ISO images of a package repository named sol.repo.iso-a and sol.repo.iso-b respectively. You need to create a single local package repository on server that clients can connect to. The package repository will be stored on the /export/IPS file system and named repo. The preferred publisher will be named solaris and the publisher URL will be http://serverA.example.com.
Which is the correct procedure to perform on ServerA to create the local Package repository?
A. cat sol.repo,iso-a sol.repo.iso-b > /export/IPS/repo.isoMount the ISO image and copy the repo directory from the ISO image to /export/IPS/reposet the pkg/inst_root property and the pkg/readonly property to /export/IPS/reposet the preferred pkg/inst_root property by using pkg set-publisher - G http://serverA.example.com/ \- g http://pkg.oracle.com/solaris.com/release/- p solaris
B. cat sol.repo.iso-a sol.repo.iso-b > /export/IPS/repoSet the pkg/inst_root property to true and the pkg/readonly property to /export/IPSSet the preferred publisher by using pkg set-publisher -G http://serverA.example.com/ \-g http://pkg/oracle.com/solaris/rekease/solaris
C. cat sol.repo.iso-a sol.repo.iso-b > sol.full.isoMount the ISO image and use the rsync command to extract the contents of the ISO file to the /export/IPS file system.Set the pkg/inst_root property to /export/IPS/repo and the pkg/readonly property to true.Set the preferred publisher by using pkg set-publisher -Ghttp://pkg.oracle.com/solaris/release/ \-g http"//serverexample.com/ solaris
D. cat sol.repo.iso-a sol.repo.iso-b > sol.full.isoMount the ISO image and use the rsync command to extract the contents of the ISO file to /export/IPS/repoSet the pkg/inst_root property to /export/IPS/repo and the pkg/readonly property to trueSet the preferred publisher by using pkg set-publisher solaris \-g http://pkg.oracle.com/
Answer: A
Explanation:
Concatenate the files into one file using the cat command.
Make the contents of the repository .iso file available using the mount command.
To increase the performance of repository accesses and to avoid the need to remount
the .iso image each time the system restarts,copy the repository files from /mnt/repo/to a
ZFS file system. You can do this copy with rsync or with tar.
