1. If a network is configured with a single SSID, which of the following is a correct configuration for the network?

A4. A network is configured with a single SSID, and the network is configured with a single SSID.

B2. A network is configured with a single SSID, and the network is configured with a single SSID.

B3. A network is configured with a single SSID, and the network is configured with a single SSID.

B4. A network is configured with a single SSID, and the network is configured with a single SSID.

B5. A network is configured with a single SSID, and the network is configured with a single SSID.

B6. A network is configured with a single SSID, and the network is configured with a single SSID.

B7. A network is configured with a single SSID, and the network is configured with a single SSID.

B8. A network is configured with a single SSID, and the network is configured with a single SSID.

B9. A network is configured with a single SSID, and the network is configured with a single SSID.

C. A network is configured with a single SSID, and the network is configured with a single SSID.

C1. A network is configured with a single SSID, and the network is configured with a single SSID.

C2. A network is configured with a single SSID, and the network is configured with a single SSID.

**Answer: B**

Explanation:

References:

<https://docs.microsoft.com/en-us/azure/virtual-network/tutorial-filter-network-traffic>

**NEW QUESTION: 3**

Refer to the exhibit.

At which point in the network topology must the trunk be configured to support multiple SSIDs for voice and data separation?

- A. B
- B. A
- C. C
- D. D

**Answer: D**

Explanation:

Controllers typically map WLANs to VLANs. When configuring a switch port to a controller, you would set the port to support 802.1Q (switchport trunk encapsulation dot1q), then set the port to trunk (switchport mode trunk) and only allow the VLANs needed by the controller (for example, switchport trunk allowed VLANs 10,20,30 if your controller needs only VLANs 10, 20, and 30).

Reference: CCNA Wireless (640-722 IUWNE) Quick Reference Guide page 111

**NEW QUESTION: 4**

Which of the following is a valid configuration for a switch port connected to a controller? (Choose two.)

A. switchport mode trunk  
switchport trunk allowed vlan 10,20,30  
switchport trunk encapsulation dot1q

B. switchport mode trunk  
switchport trunk allowed vlan 10,20,30  
switchport trunk encapsulation dot1q  
switchport mode dot1q

C. switchport mode dot1q  
switchport trunk allowed vlan 10,20,30  
switchport trunk encapsulation dot1q

D. switchport mode dot1q  
switchport trunk allowed vlan 10,20,30  
switchport trunk encapsulation dot1q  
switchport mode trunk

- A. switchport mode trunk  
switchport trunk allowed vlan 10,20,30  
switchport trunk encapsulation dot1q
- B. switchport mode trunk  
switchport trunk allowed vlan 10,20,30  
switchport trunk encapsulation dot1q  
switchport mode dot1q
- C. switchport mode dot1q  
switchport trunk allowed vlan 10,20,30  
switchport trunk encapsulation dot1q
- D. switchport mode dot1q  
switchport trunk allowed vlan 10,20,30  
switchport trunk encapsulation dot1q  
switchport mode trunk

**Answer: B**
