Answer: A

NEW QUESTION: 3

You are performing a port scan with nmap. You are in hurry and conducting the scans at the fastest possible speed. However, you don't want to sacrifice reliability for speed. If stealth is not an issue, what type of scan should you run to get very reliable results?

- A. Stealth scan
- B. Fragmented packet scan
- C. Connect scan
- D. XMAS scan

Answer: C

Explanation:

A TCP Connect scan, named after the Unix connect() system call is the most accurate scanning method. If a port is open the operating system completes the TCP three-way handshake, and the port scanner immediately closes the connection.

NEW QUESTION: 4

Sie entwickeln eine .NET Core MVC-Anwendung, mit der Kunden nach Hotels suchen können. Die Anwendung verwendet Azure Search. Die Anwendung durchsucht den Index nach verschiedenen Kriterien, um Dokumente zu finden, die sich auf Hotels beziehen. Der Index enthält Suchfelder für die Rate, eine Liste der Annehmlichkeiten und die Entfernung zum

nächstgelegenen Flughafen.

Die Anwendung muss die folgenden Szenarien zum Angeben von Suchkriterien und zum Organisieren von Ergebnissen unterstützen:

- * Durchsuchen Sie den Index mit regulären Ausdrücken.

- * Organisieren Sie die Ergebnisse nach Anzahl der Name-Wert-Paare.

- * Liste der Hotels innerhalb einer bestimmten Entfernung zu einem Flughafen, die in eine bestimmte Preisspanne fallen.

Sie müssen die SearchParameters-Klasse konfigurieren.

Welche Eigenschaften sollten Sie konfigurieren? Wählen Sie zum Beantworten die entsprechenden Optionen im Antwortbereich aus.

HINWEIS Jede richtige Auswahl ist einen Punkt wert.

Answer:

Explanation:

Explanation:

Box 1: QueryType

The SearchParameters.QueryType Property gets or sets a value that specifies the syntax of the search query. The default is 'simple'. Use 'full' if your query uses the Lucene query syntax.

You can write queries against Azure Search based on the rich Lucene Query Parser syntax for specialized query forms:

wildcard, fuzzy search, proximity search, regular expressions are a few examples.

Box 2: Facets

The facets property gets or sets the list of facet expressions to apply to the search query. Each facet expression contains a field name, optionally followed by a comma-separated list of name:value pairs.

Box 3: Filter

The Filter property gets or sets the OData \$filter expression to apply to the search query.
