NEW QUESTION: 1

You plan to deploy a SharePoint Server 2013 server farm. The farm will have two front-end Web servers that are configured as shown in the following table.

You need to ensure that pages are rendered by using the front-end Web server that has the smallest health threshold value.

Which service should you use?

- A. Microsoft SharePoint Foundation Subscription Settings Service
- B. Distributed Cache
- C. Work Management Service
- D. Request Management

Answer: D

Explanation:

Explanation/Reference:

Request Manager is functionality in SharePoint Server 2013 that enables administrators to manage incoming requests and determine how SharePoint Server 2013 routes these requests.

Note: Request routing and prioritizing can be divided into two parts: request-rule matching and front-end web server filtering. Request-rule matching happens exactly like in request routing. Front-end web server filtering uses the health

threshold parameter from the throttling rules in combination with front-end web server health data to determine whether the front-end web servers in the selected routing pool can process the given request.

NEW QUESTION: 3

Refer to the exhibit. Which option shows the expected result if a show vlan command is issued?

A.

B.

C.

D.

Answer: C

Explanation:

In this case, the port has been configured both as a trunk and as a switchport in data vlan 10.

Obviously, a port can not be both, so even though Cisco IOS will accept both, the port will actually be used as a trunk, ignoring the switchport access VLAN 10 command.
