NEW QUESTION: 3

A. Option B
B. Option C
C. Option A
D. Option D
Answer: C

Explanation:
Explanation
Auto Scaling lifecycle hooks enable you to perform custom
actions as Auto Scaling launches or terminates instances. For
example, you could install or configure software on newly
launched instances, or download log files from an instance
before it terminates.
After you add lifecycle hooks to your Auto Scaling group, they
work as follows:
1. Auto Scaling responds to scale out events by launching
instances and scale in events by terminating instances.
2. Auto Scaling puts the instance into a wait state
(Pending:Wait orTerminating:Wait). The instance remains in this
state until either you tell Auto Scaling to continue or the
timeout period ends.
For more information on rolling updates, please visit the below
