Answer: C

NEW QUESTION: 2

Which statement describes an assembly?

- A. A snapshot that reflects the state of all components of a virtual document at a specific point in time
- B. The repositioning of a descendent in a virtual document
- C. The dmr_containment object that the Content Server creates for a virtual document's components
- D. The standardization of the formats of each component within of a virtual document

Answer: A

NEW QUESTION: 3

- A. Option D
- B. Option A
- C. Option B
- D. Option C

Answer: C

Explanation:

A content source is a set of options that you use to specify what, when, and how to crawl. When a Search service application is created, a content source named "Local SharePoint sites" is automatically created and configured for crawling all SharePoint sites in the local server farm. You can create additional content sources to specify other content to crawl and how the system should crawl that content. After you create a content source, you can edit or delete it at any time.

NEW QUESTION: 4

You have a server named Server1 that runs Windows Server 2016. You plan to deploy Internet Information Services (US) in a Windows container.

You need to prepare Server1 for the planned deployment.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order

Answer:

Explanation:
