NEW QUESTION: 4

A solution architect has finished conducting interviews and gathering requirements for a company, and has determined that the logical requirements are:

- * two data centers for high availability
- * synchronous replication to meet the zero-minute RPO
- * separating management workloads from application workloads
- * dedicated 10Gb uplink for each low latency server
- * single management port for the entire environment

Which two actions would meet the design requirements? (Choose two.)

- A.** Configure vSAN Stretched Clustering.
- B.** Configure SR-IOV for low latency servers.
- C.** Create one folder for Management workloads and one folder for application workloads.
- D.** Create two data center objects in vCenter Server.

Answer: A,C

Explanation:

Explanation

Folders don't separate workloads (management object only) and Zero-RPO implies vSAN stretched cluster.

Even though the vSAN nodes are at different sites, they must reside within one logical data center in vCenter (and inside a single Cluster Object).
