NEW QUESTION: 1

The Firewall kernel is replicated multiple times, therefore:

- A. The Firewall can run different policies per core
- B. The Firewall can run the same policy on all cores.
- C. The Firewall kernel is replicated only with new connections

and deletes itself once the connection times out
D. The Firewall kernel only touches the packet if the connection is accelerated

Answer: B

Explanation:

Explanation

On a Security Gateway with CoreXL enabled, the Firewall kernel is replicated multiple times. Each replicated copy, or instance, runs on one processing core. These instances handle traffic concurrently, and each instance is a complete and independent inspection kernel. When CoreXL is enabled, all the kernel instances in the Security Gateway process traffic through the same interfaces and apply the same security policy.

NEW QUESTION: 2

Which of the following BEST describes geotracking?

- A.** SMS information that is sent to people in their contacts
- B.** Location software to locate a user's missing cellular device
- C.** Location data embedded into pictures that have been taken
- D.** An enabled cookie that sends user location data to vendors

Answer: C

NEW QUESTION: 3

Answer:

Explanation:

Explanation

TableA: REBUILD ... WITH (ONLINE =OFF)

The data types image, ntext, and text can be rebuild offline only.

TableB: REBUILD ... WITH (ONLINE =ON)

You CAN do online index rebuilds of varchar(max), nvarchar(max), and varbinary(max) data types.

Note: When an index is created or rebuilt in SQL Server, statistics are created or updated by scanning all the rows in the table.

However, starting with SQL Server 2012 (11.x), statistics are not created or updated by scanning all the rows in the table when a partitioned index is created or rebuilt. Instead, the query optimizer uses the default sampling algorithm to generate these statistics. To obtain statistics on partitioned indexes by scanning all the rows in the table, use CREATE STATISTICS or UPDATE STATISTICS with the FULLSCAN clause.
