NEW QUESTION: 1

Scenario: A Citrix Architect needs to design a new XenApp and XenDesktop environment. The customer previously installed all applications locally on managed laptops and desktops but is willing to evaluate other application delivery methods as part of the new deployment. The environment will be standardized on Windows 10 and Windows Server 2016 for the Virtual Delivery Agent (VDA) machines.

As part of an application analysis performed earlier in the project, the information in the Exhibit was collected regarding one of the required applications.

Click the Exhibit button to view the information.

The customer has an additional objective to minimize the number

of images that must be managed.

How should the architect install the application?

- A.** Stream it to a VDA machine using Microsoft App-V and accessed through a virtual desktop session
- B.** On an Application Layer using Citrix App Layering, be included in a layered image, and accessed through a virtual desktop session
- C.** Directly on endpoint devices and included in a virtual desktop session using the Local App Access feature
- D.** On an Application Layer using Citrix App Layering then be presented to assigned users as an Elastic Layer during a virtual desktop session
- E.** Directly on a Server OS VDA machine and accessed from the endpoint as a published application

Answer: D

NEW QUESTION: 2

You plan to deploy an Azure container instance by using the following Azure Resource Manager template.

Use the drop-down menus to select the answer choice that completes each statement based on the information presented in the template.

Answer:

Explanation:

Box 1: can connect to the container from any device

In the policy "osType": "window" refer that it will create a container in a container group that runs Windows but it won't block access depending on device type.

Box 2: the container will restart automatically

Docker provides restart policies to control whether your containers start automatically when they exit, or when Docker restarts. Restart policies ensure that linked containers are started in the correct order. Docker recommends that you use restart policies, and avoid using process managers to start containers.

on-failure : Restart the container if it exits due to an error, which manifests as a non-zero exit code.

As the flag is mentioned as "on-failure" in the policy, so it will restart automatically
