Implement Role-Based Administration

You can use role-based administration to organize certification authority (CA) administrators into separate, predefined CA roles, each with its own set of tasks. Roles are assigned by using each user's security settings.

You assign a role to a user by assigning that user the specific security settings that are associated with the role. A user that has one type of permission, such as Manage CA permission, can perform specific CA tasks that a user with another type of permission, such as Issue and Manage Certificates permission, cannot perform.

The following table describes the roles, users, and groups that can be used to implement role-based administration. Roles and groups Certificate manager Security permission Issue and Manage Certificates

Description Approve certificate enrollment and revocation requests. This is a CA role. This role is sometimes referred to as CA officer. These permissions are assigned by using the Certification Authority snap-in.
