Answer: B

NEW QUESTION: 2
Which three are valid modes for a switch port used as a VLAN trunk? (Choose three.)
A. blocking
B. on
C. desirable
D. forwarding
E. auto
F. transparent

Answer: B,C,E
Explanation:
These are the different types of trunk modes:
*
ON: This mode puts the port into permanent trunk mode and
negotiates to convert the link into a trunk link. The port
becomes a trunk port even if the adjacent port does not agree
to the change.
*
OFF: This mode puts the port into permanent non-trunk mode and
negotiates to convert the link into a non-trunk link. The port
becomes a non-trunk port even if the adjacent port does not
agree to the change.
*
Desirable: This mode causes the port to actively attempt to
convert the link into a trunk link. The port becomes a trunk
port if the adjacent port is set to on, desirable, or auto
mode.
*
Auto: This mode enables the port to convert the link into a
trunk link. The port becomes a trunk port if the adjacent port
is set to on or desirable mode. This is the default mode for
Fast and Gigabit Ethernet ports.
* Nonegotiate: This mode puts the port into permanent trunk
mode, but does not allow the port to generate Dynamic Trunking
Protocol (DTP) frames. The adjacent port must be configured
manually as a trunk port to establish a trunk link.
