Answer :

Explanation:

Explanation:

```
Box 1: var todoTable = client GetSyncTable<TodoItem>();
```

To setup offline access, when connecting to your mobile service, use the method GetSyncTable instead of GetTable (example):

```
IMobileServiceSyncTable todoTable = App.MobileService.GetSyncTable(); / Box 2: await todoTable.PullAsync("allTodoItems",todo.Table.CreateQuery());
```

Your app should now use IMobileServiceSyncTable (instead of IMobileServiceTable) for CRUD operations. This will save changes to the local database and also keep a log of the changes. When the app is ready to synchronize its changes with the Mobile Service, use the methods PushAsync and PullAsync (example):

```
await App.MobileService.SyncContext.PushAsync(); await todoTable.PullAsync();
```
