Whether you like to study on the computer or like to read paper materials, our 1z0-1038-22 learning materials can meet your needs.

NEW QUESTION: 1

You have an Azure subscription that contains the resource groups shown in the following table.

RG1 contains the resources shown in the following table.

Answer:

Explanation:

NEW QUESTION: 2

Sie haben einen Server mit dem Namen Server1, auf dem Windows Server 2012 R2 ausgeführt wird. Auf Server1 ist die Hyper-V-Serverrolle installiert.

Ein iSCSI-SAN ist im Netzwerk verfügbar.

Server1 hostet vier virtuelle Maschinen mit den Namen VM1, VM2, VM3, VM4.

Sie erstellen eine LUN im SAN.

Sie müssen VM1 Zugriff auf die LUN gewähren. Die Lösung muss verhindern, dass andere virtuelle Maschinen auf die LUN zugreifen.

Was solltest du konfigurieren?

- A. Eine Pass-Through-Platte
- B. Dynamisch expandierendes VHDX
- C. Eine dynamisch expandierende VHD
- D. Eine VHD mit fester Größe
- E. Ein VHDX mit fester Größe

Answer: A

Explanation:

Erläuterung

Sie können physische Festplatten, die direkt an eine virtuelle Maschine angeschlossen sind, als Speicheroption im Verwaltungsbetriebssystem verwenden. Auf diese Weise können virtuelle Maschinen auf Speicher zugreifen, der direkt dem Server zugeordnet ist, auf dem Hyper-V ausgeführt wird, ohne zuvor das Volume zu konfigurieren. Der Speicher kann entweder eine physische Festplatte sein, die sich innerhalb des Servers befindet, oder eine SAN-LUN (Logical Unit Number), die dem Server zugeordnet ist (eine LUN ist eine logische Referenz auf einen Teil eines Speichersubsystems). Die virtuelle Maschine muss exklusiven Zugriff auf den Speicher haben, daher muss der Speicher in der Datenträgerverwaltung in den Offline-Status versetzt werden. Der Speicher ist nicht in der Größe beschränkt, daher kann es sich um eine Multi-Terabyte-LUN handeln. Wenn Sie physische Datenträger verwenden, die direkt an eine virtuelle Maschine angeschlossen sind, sollten Sie Folgendes beachten:

Dieser Festplattentyp kann nicht dynamisch erweitert werden. Sie können keine unterschiedlichen Datenträger mit ihnen

verwenden.

Sie können keine Snapshots der virtuellen Festplatte erstellen.

Att:

Wenn Sie ein Betriebssystem auf der physischen Festplatte installieren und es sich vor dem Start der virtuellen Maschine in einem Online-Status befindet, kann die virtuelle Maschine nicht gestartet werden. Sie müssen die Konfigurationsdatei der virtuellen Maschine an einem anderen Speicherort speichern, da der physische Datenträger von der Betriebssysteminstallation verwendet wird. Suchen Sie beispielsweise die Konfigurationsdatei auf einem anderen internen Laufwerk auf dem Server, auf dem Hyper-V ausgeführt wird.

NEW QUESTION: 3

You have a Hyper-V host named Server1 that runs the virtual machines shown in the following table

All the virtual machines run Windows server 2016. The firewall of the virtual machines are configured to allow ping requests. The network adapters to a virtual switch named Switch1. Switch is configured as shown in the following exhibit.

For each of the following statements select Yes if the statement is true Otherwise select No.

NOTE: Each t cured selection is worth one point.

Answer:

Explanation:

Explanation

NEW QUESTION: 4

Which action must be completed on the HMC when a partition is in a Recovery state?

- A. Select Recover Partition Data for the managed system.
- B. Select Configuration and Restore partition data.
- C. Select Configuration and Rebuild Managed System.
- D. Select Initialize Partition for the LPAR in Recovery state

Answer: A
