Answer: A

Explanation:

The Weighted Routing policy of Route53 can be used to direct a proportion of traffic to your application. The best option is to create a second CLB, attach the new Autoscaling Group and then use Route53 to divert the traffic.

Option B is wrong because just having EC2 instances running with the new code will not help.

Option C is wrong because Clastic beanstalk is good for development environments, and also there is no mention of having 2 environments where environment url's can be swapped.

Option D is wrong because you still need Route53 to split the traffic.

For more information on Route53 routing policies, please refer to the below link:
