**NEW QUESTION: 2**

Match the Azure Data Lake Storage terms to the appropriate levels in the hierarchy.

To answer, drag the appropriate term from the column on the left to its level on the right. Each term may be used once, more than once, or not at all.

NOTE: Each correct match is worth one point.

**Answer:**

Explanation:

**NEW QUESTION: 3**

Which variable in an EEM applet is set when you use the sync yes option?

- A. \$\_cli\_result

- B. `$_string_result`
- C. `$_result`
- D. `$_exit_status`

**Answer: D**

Explanation:

Explanation/Reference:

Explanation:

The CLI event detector screens CLI commands for a regular expression match. When a match is found, an event is published. The match logic is performed on the fully expanded CLI command after the command is successfully parsed and before it is executed. The CLI event detector supports three publish modes: Synchronous publishing of CLI events--The CLI command is not executed until the EEM policy exits, and the EEM policy can control whether the command is executed. The read/write variable, `_exit_status`, allows you to set the exit status at policy exit for policies triggered from synchronous events. If `_exit_status` is 0, the command is skipped, if `_exit_status` is 1, the command is run. Reference: <http://www.cisco.com/c/en/us/td/docs/ios-xml/ios/eem/command/eem-cr-book/eem-cr-e1.html>
