- A. The ppk file used for SSH is read only
- B. The user has provided the wrong user name for the OS login
- C. The private key file has the wrong file permission
- D. The public key file has the wrong permission

Explanation:

While doing SSH to an EC2 instance, if you get an Unprotected Private Key File error it means that the private key file's permissions on your computer are too open. Ideally the private

key should have the Unix permission of 0400. To fix that, run the command:

chmod 0400 /path/to/private.key
