Answer: C
Explanation:
Explanation
AWS provides an on demand, scalable infrastructure. AWS EC2
allows the user to launch On- Demand instances. AWS does not
provide a fixed MAC address to the instances launched in
EC2-CLASSIC. If the instance is launched as a part of EC2-VPC,
it can have an ENI which can have a fixed MAC. However, with
EC2-CLASSIC, every time the instance is started or stopped it
will have a new MAC address. To get this MAC, the organization
can run a script on boot which can fetch the instance metadata
and get the MAC address from that instance metadata. Once the
MAC is received, the organization can register that MAC with
the software.

NEW QUESTION: 2
Which technology supports tunnel interfaces while remaining
compatible with legacy VPN implementations?
A. DMVPN
B. FlexVPN
C. GET VPN
D. SSL VPN
Answer: B

NEW QUESTION: 3
This iron is displayed on the desktop of a laptop computer,
which is running Oracle Solaris 11.

Which two statements describe the Information conveyed by this
Icon?
A. NWAM is automatically configuring the network.
B. NWAM is disabled.
C. The wireless network card is manually configured and
operational.
D. The wireless network card is automatically configured and
operational.
E. The wireless network card is manually configured but not
operational.

F. The wireless network card is automatically configured but not operational.
Answer: A,C
Explanation:
B: The Network Status notification icon is only displayed on the desktop if you are using NWAM to automatically configure your network.
C: All online (Wireless)
Indicates all manually enabled connections in the enabled network profile are online and that the required number of connections in the enabled profile group (if such a group exists) are online.
The required number is the same as those described for the All online (Wired) status.
Note that at least one online connection is wireless.
