NEW QUESTION: 2

Your network contains a file server named Server1 that runs Windows Server 2008 R2. You have a folder named Folder1. You need to ensure that files in Folder1 that are older than 365 days are automatically moved to an archive folder. What should you create from the File Server Resource Manager console?

- A. a file management task
- B. a file screen
- C. a quota
- D. a file group

Answer: A

Explanation:

You can use file management tasks to perform the following actions:

-

Create and update file expiration tasks, which move all files that match a set of criteria to a specified directory where an administrator can then back up and delete the files. Files can be set to expire based on classification values, or after a specified number of days since the file was created, modified, or last accessed.

-

Create and update custom tasks, which allow you to run a command or script in a specified working directory.

-Send e-mail notifications, send a warning to the event log, or run a command or script at a specified number of days before the file management task is scheduled to run.
