#### **NEW QUESTION: 1**

You need to ensure that the repository runs the script when new software is released.

Which technology should you use?

- A. Azure Function
- B. Azure App Service Logic App
- C. Azure Webjob
- D. Azure App Service API App

**Answer: A**

Explanation:

Using Azure Functions with F#. Azure Functions is a solution for easily running small pieces of code, or "functions," in the cloud. You can write just the code you need for the problem at hand, without worrying about a whole application or the infrastructure to run it.

Your functions are connected to events in Azure storage and other cloud-hosted resources.

Data flows into your F# functions via function arguments. You can use your development language of choice, trusting Azure to scale as needed.

**NEW QUESTION: 2**

- A. Option D
- B. Option B
- C. Option C
- D. Option A

**Answer: D**

**NEW QUESTION: 3**

For client server failover purposes, the application server team has indicated that they must not have the standard 30 second delay before their switchport enters a forwarding state. For their disaster recovery feature to operate successfully, they require the switchport to enter a forwarding state immediately. Which spanning-tree feature satisfies this requirement?

- A. Spanning-Tree FastPort
- B. Spanning-Tree PortFast
- C. Spanning-Tree Fast Forward
- D. Rapid Spanning-Tree
- E. Spanning-Tree Timers

**Answer: B**

Explanation:

In order to allow immediate transition of the port into forwarding state, enable the STP PortFast feature. PortFast immediately transitions the port into STP forwarding mode upon linkup. The port still participates in STP. So if the port is to be a part of the loop, the port eventually transitions into STP blocking mode. Example configuration: Switch-C# configure terminal Switch-C(config)# interface range fa0/3 - 24 Switch-C(config-if-range)# spanning-tree portfast
