Answer:

Explanation:

Explanation:

* read committed

READ COMMITTED

Specifies that shared locks are held while the data is being read to avoid dirty reads, but the data can be changed before the end of the transaction, resulting in nonrepeatable reads or phantom data. This option is the SQL Server default.

* SERIALIZABLE

Places a range lock on the data set, preventing other users from updating or inserting rows into the data set until the transaction is complete. This is the most restrictive of the four isolation levels. Because concurrency is lower, use this option only when necessary. This option has the same effect as setting HOLDLOCK on all tables in all SELECT statements in a transaction.

NEW QUESTION: 3

Which THREE of the below are possible reasons for an entity's capital amount to change?

- A. New or withdrawn capital
- B. Depreciation of non-current assets
- C. Drawings
- D. Net profit/loss

Answer: A,C,D
