NEW QUESTION: 1
Service A is a Web service that accesses the Student table in a shared database in order to store XML-based student records. When invoked, the GetStudent operation of Service A uses a StudentID value to retrieve the record of a single student by executing an XPath query. An attacker sends a malicious message that manipulates the XPath query to return all the student records. Which of the following attacks was carried out?
A. XPath injection attack
B. XML parser attack
C. None of the above
D. SQL injection attack
Answer: A

NEW QUESTION: 2
You executed this command to create a temporary table:
SQL> CREATE GLOBAL TEMPORARY TABLE report_work_area (
startdate DATE,
enddate DATE,
class CHAR(20)
) ON COMMIT PRESERVE ROWS;

NEW QUESTION: 3

A. Option D
B. Option C
C. Option A
D. Option B
Answer: D
Explanation:
add boolean add(E e) Inserts the specified element into the queue represented by this deque (in other words, at the tail of thisdeque) if it is possible to do so immediately without violating capacity restrictions, returning true uponsuccess and throwing an IllegalStateException if no space is currently available. When using acapacity-restricted deque, it is generally preferable to use offer. This method is equivalent to addLast(E). remove E remove() Retrieves and removes the head of the queue represented by this deque (in other words, the first element ofThisdeque). This method differs from poll only in that it throws an exception if this deque is empty. This method is equivalent to removeFirst(). Returns: Thehead of the queue represented by this deque Class ArrayDeque
