NEW QUESTION: 1

You have custom Network File System (NFS) client settings for your Amazon Elastic File System (EFS). It takes up to three seconds for an Amazon Elastic Compute Cloud (EC2) instance to see a write operation performed on a file system from another Amazon EC2 instance.

Which of the following actions should you take to solve the custom NFS settings from causing delays in the write operation?

- A.** Reduce the number of active users that have files open simultaneously on the instances.
- B.** Run the write operation from a different user ID on the same Amazon EC2 instance.
- C.** Verify that the IP address of the specified mount target is valid.
- D.** Unmount and remount the file system with the noac option to disable attribute caching.

Answer: D

Explanation:

Explanation/Reference:

Explanation:

When you set up custom NFS client settings, it takes up to three seconds for an Amazon EC2 instance to see a write operation being performed on a file system from another Amazon EC2 instance. To solve this issue, you must unmount and remount your file system with the noac option to disable attribute

caching if the NFS client on the Amazon EC2 instance that is reading the data has attribute caching activated. Attribute cache can also be cleared on demand by using a programming language that is compatible with the NFS procedures. To do this, you must send an ACCESS procedure request immediately before a read request.

NEW QUESTION: 2

Which manager tools Option is available in the Cisco WebEx Support Center?

- A. Provide notification when a customer is in your queue.
- B. Set up queues with rules-based routing, by availability or skill set.
- C. Allow technicians to reboot and reconnect
- D. Send out a post-survey and notes.

Answer: B

NEW QUESTION: 3

A 'Pseudo flaw' is which of the following?

- A. An apparent loophole deliberately implanted in an operating system program as a trap for intruders.
- B. An omission when generating Psuedo-code.
- C. Used for testing for bounds violations in application programming.
- D. A normally generated page fault causing the system to halt.

Answer: A

Explanation:

A Pseudo flaw is something that looks like it is vulnerable to attack, but really acts as an alarm or triggers automatic actions when an intruder attempts to exploit the flaw.

The following answers are incorrect:

An omission when generating Psuedo-code. Is incorrect because it is a distractor.

Used for testing for bounds violations in application programming. Is incorrect, this is a testing methodology.

A normally generated page fault causing the system to halt. This is incorrect because it is a distractor.

NEW QUESTION: 4

You have a server named Server1 that runs Windows Server 2016. On Server1 you use the Basic template to create a new Data Collector Set named CollectorSet1.

You need to configure data collection for the performance counters. The configuration must support the following requirements:

- * Data collection must run on a schedule.

- * Data collection must stop if there is less than 1 GB of free disk space.

What should you modify to meet each requirement? To answer, drag the appropriate settings to the correct requirements. Each setting may be used once, more than once, or not at all. You may need to drag the Split bar between panes or scroll to view content.
