The dumps can let you better accurate understanding questions point of TDS-C01 exam so that you can learn purposefully the relevant knowledge, Soft version of TDS-C01: Tableau Desktop Specialist test questions are downloaded and installed in personal computers (Windows operating system and Java environment).

NEW QUESTION: 1

You are developing an ASP.NET Core web application by using an Entity Framework code-first approach.

The application uses an Azure SQL Database. The code-first migration is configured to run as part of a continuous integration build.

You must add an Azure MySQL Database. This database must use the same schema as the existing Azure SQL Database instance. You need to configure the migration to ensure that the existing TFS build definition remains unchanged.

What are two possible ways to achieve this goal? Each correct answer presents a complete solution.

NOTE: Each correct selection is worth one point.

- A.** Use the `ActiveProvider` property to specify the provider to which the migration is applied.
- B.** Create a separate Migration Assembly than the one containing the `DbContext` and switch the active provider during build.
- C.** Create a new type that derives from `DbContext` and override the `ActiveProvider` object. Then, add or apply migrations using this type.
- D.** Use the Entity Framework Core Fluent API to identify

database providers.

Answer: C,D
